Part of the Palamatic Group

Palamatic

Palamatic Ltd have supplied lifting equipment from their headquarters in Chesterfield, England into the Pharmaceutical industry since 1985. As interest grew for safe lifting and handling solutions within the Pharmaceutical industry, Palamatic focused resources on designing a purpose-built range of lifting and handling equipment to meet the rigorous standards of the hygienic process industries. By 2004 sales of the hygienic range of lifting and handling equipment warranted dedicated resources and at this point the PalPharma division was established with a team of technical sales and engineering resources, skilled fitters and dedicated office and assembly areas. PalPharma is now an established and leading force in handling solutions for the Pharmaceutical, Healthcare, Medical, Fine Chemicals, Cosmetics and Nuclear industries.

PalPharma includes an experienced sales network and project team with in depth knowledge of the Pharmaceutical industry able to advise and offer new ideas for solutions to your handling requirements.

Containers, Valves, Powder Transfer, Dust Containment and Ancillary Devices

PalPharmaBin IBC range available - 50L - 2500L

- Used in the production of solid dosage pharmaceuticals, food and chemical ingredients in the process industries.
- Optional bespoke bases to ensure a neat fit with existing machinery such as blenders.

PalPharmaValve The range includes:-

- The Oyster Compact series features the patent Clamshell clamp system, widely acknowledged as the most compact, hygienic and user-friendly valve on the market.
- The Oyster butterfly series ensures optimal hygienic and functional characteristics, and eliminates recesses with hard-to-clean corners.
- The Oyster Flowmaster Valve. The dosing rotor is robustly fabricated and shaped in order to provide a tight seal when closed but to cause minimal wear on the seal when in operation.
- The Oyster Superclean Valve where the stem inclined at an angle to the plane of the valve disc. This means that the driveshaft does not pass through the seal. Tightness is achieved by means of a plain seal with no hole, enabling greater flexibility in the choice of materials and improved washability.
- The Oyster Flexivane Valve. The flexible leaf is co-moulded in FDA compatible valve body silicone and gives the flexibility necessary to ensure no damage to tablets or capsules being processed.

The Oyster Samplemaster basic design can be customised to suit almost any installation, and it is also available in CIP version.
